Reason 4

The cost of replacing PVC medical devices with alternative materials would equate an annual increase of €300 million per year for the European healthcare industry:

The Economic Benefits of Polyvinyl Chloride in the United States and Canada, Whitfield & Associates, December 2008, http://www.pvc.org/upload/documents/The_Economics_of_PVC.pdf

PVC flooring offers both the lowest initial cost and the lowest cost of ownership compared to some alternative materials over their entire lifetime:

PVC products competitiveness, A total cost of ownership approach (TCO), Prof. Alessandro Marangoni, 2011, http://www.pvc.org/upload/documents/TCO_ppt_ProfMarangoni.pdf

Reason 6

Carbon footprint data:

CCaLC Tool, University of Manchester, <http://www.ccalc.org.uk/pvcsustainability.php>

Reason 9

A total of 474,411 tonnes of PVC, including flooring, was recycled across 16 European countries in 2014:

RecoVinyl 2014 results, May 2015, <http://www.recyclinginternational.com/recycling-news/8742/plastic-and-rubber/europe/europe-records-pvc-recycling-growth-2014>

<http://www.vinylplus.eu/>

Following the success of recycling certain PVC medical devices in Australia, PVC recycling schemes are now a reality in the UK:
